Maximum Sample Error for Different Sample Sizes At the 95% Level of Confidence

Notes to Tables

1. All data are shown based on usable questionnaires representing the Full Year 2000 survey, which extended from September 7, 1999 to September 4, 2000. The findings are comparable to those obtained in Marketing Year 1999 and preceding years (Fiscal 1998/99 (1998), Fiscal 1997/98 (1997) and Fiscal 1996/97 (1996)) due to standardization of the sampling methodology and collection of statistics used to balance the sample during data processing.

It should be noted that some sites did not follow the directions for executing the survey as well as anticipated, and the results may not be representative of their visitor populations. More detailed information on these sites is available in the written report.

2. All percentages shown in the tables which follow are based on "weighted" data. Weights were derived for each site independently for attendance by origin (local, i.e., within 40 km or 25 miles of the site, other Albertans and non-Albertans) and type of day (long weekend event day/weekday public holiday event day, weekend event day, normal long weekend day/normal weekday public holiday, normal weekend day, discount Tuesday and normal weekday/weekday event day).

Since the site samples were drawn disproportionately to provide a minimum margin of error of plus or minus 10% at the 95% level of confidence (i.e., requiring a random sample of at least 100 interviews), the sites were also weighted relative to one another. This weight restored their relative representation to the correct proportions as reflected by regular-hours independent visitor attendance, without losing the reliability of the underlying sample size.

3. The last total row in all tables shows the unweighted base from which the figures in each column are derived. The larger the unweighted sub-sample, the more confident one can be in the results, as shown in the graph opposite. The margin of error for the full survey and for the large sites individually was:

± 1.4%	Total
± 4.3%	Frank Slide
± 4.6%	Head-Smashed-In Buffalo Jump
± 4.4%	Provincial Museum of Alberta
± 4.7%	Remington-Alberta Carriage Centre
± 4.1%	Reynolds-Alberta Museum
± 4.3%	Royal Tyrrell Museum of Paleontology
± 4.7%	Ukrainian Cultural Heritage Village

The margin of error for the smaller sites and for breakdowns shown in the tabulations can be estimated from the graph. While every effort was made not to tabulate data with unweighted bases of less than 20, this did occur on occasion, and these results should be ignored due to their lack of reliability. Data derived from bases of less than 50 should be treated with caution.
